

Project Title: Retail Sales KPI Dashboard

Project Description:

Designed and developed a comprehensive **Retail Sales KPI Dashboard** using **spreadsheets (Google Sheets and Microsoft Excel)** to track and optimize retail performance metrics. This dynamic dashboard provides a centralized view of critical KPIs, enabling real-time monitoring of total sales, profit margins, daily and weekly performance trends, and progress toward annual targets.

Key Features:

- **Sales Performance Overview:** Highlights total sales, gross profit, and comparison against monthly and annual targets.
- **Time-Based Trends:** Visual analysis of daily, weekly, and monthly sales patterns for better forecasting and planning.
- **Goal Tracking:** Monitors progress toward yearly sales objectives and highlights gaps to address proactively.
- **Visual Insights:** Interactive charts and conditional formatting offer clear, actionable insights for faster decision-making.
- **Operational Monitoring:** Identifies key areas for improvement in retail performance and uncovers growth opportunities.

Technologies Used:

- **Google Sheets & Microsoft Excel** – for data modeling, visualization, and dashboard development.
- **Google Cloud Platform (GCP)** – for collaborative access and data storage (if applicable).
- **Microsoft Office** – for data presentation and reporting.

Outcome:

Empowered retail teams with a powerful, easy-to-use dashboard that ensures performance remains on track and enables quick, informed decision-making in a fast-paced retail environment.

Skills Applied:

Business Analytics · Business Intelligence (BI) · Data Analytics · Data Cleaning · E-Commerce · Spreadsheets · Retail Analytics · Google Sheets · GCP · Microsoft Excel
